PROFILE

Researcher and engineer working across efficient reasoning, on-policy distillation, generative and multimodal models, and long-horizon agents. M.S. at CASIA / UCAS; LLM algorithm intern at JD Explore Academy.

EXPERIENCE

01 /

JD Explore Academy

JAN 2026 — PRESENT

LLM Algorithm Intern · Natural Language Lab

- Work on long-context full-parameter SFT, preference optimization, and agent post-training workflows.
- Connect trajectory provenance, supervision masks, packed sequences, checkpoint lineage, and agent evaluation.
- Co-authored the JoyAI-LLM Flash report and supported its open release (48B total / ~2.7B active MoE).

SELECTED RESEARCH

02 /

UNDER REVIEW · ICLR 2027	ACTS · CATER · SP-OPD · CrystalBind · ClueFlow · SVI-Bench
UNDER REVIEW · AAAI 2027	TEAL · SearchAuditor

ACTS

Evidence-first synthesis links source-backed facts to the search actions needed to discover them.

SP-OPD

KL-projects teacher targets to respect verifier-accepted trajectories during on-policy distillation.

SVI-Bench CO-FIRST AUTHOR

A 75-item, nine-scenario streaming-video benchmark with five dimensions and synchronized InteractFlow traces.

SearchAuditor THIRD AUTHOR

Localizes critical errors in long search trajectories and grounds repair instructions in evidence.

CATER

Routes verified student rollouts to correctness RL or concise self-distillation by current competence.

ClueFlow CO-FIRST AUTHOR

Persistent evidence and candidate state support provenance and turn-level credit in long search.

TEAL

Typed evidence slots make fixed multimodal features readable to pretrained token backbones.

CrystalBind UNDER REVIEW

Counterfactual prompt switches probe diffusion attribute binding; inference-time guidance targets ownership.
