PROFILE

Researcher and engineer studying how information shapes model behavior, from diffusion generation and multimodal feature interfaces to post-training and long-horizon agents. M.S. at CASIA / UCAS; LLM algorithm intern at JD Explore Academy.

EXPERIENCE

01 /

JD Explore Academy

JAN 2026 — PRESENT

LLM Algorithm Intern · Natural Language Lab

- Work on long-context full-parameter SFT, preference optimization, and agent post-training workflows.
- Connect trajectory provenance, supervision masks, packed sequences, checkpoint lineage, and agent evaluation.
- Co-authored the JoyAI-LLM Flash report and supported its open release (48B total / ~2.7B active MoE).

SELECTED RESEARCH

02 /

ACTS

Evidence-first synthesis for long-horizon search, linking source-backed facts with the actions needed to discover them.

CrystalBind ONGOING RESEARCH

Counterfactual prompt switches probe diffusion attribute binding; inference-time guidance targets ownership without new model weights.

TEAL ONGOING RESEARCH

Typed evidence slots help token backbones read fixed multimodal features; direct-feature and no-backbone controls isolate interface effects.

ClueFlow CO-FIRST AUTHOR

Persistent evidence and candidate state with source-to-state-to-final provenance; hybrid supervision and turn-level learning.

SearchAuditor THIRD AUTHOR

A public benchmark of 1,243 failed trajectories from eight models, with evidence-anchored error localization and repair synthesis.

SVI-Bench / InteractFlow CO-FIRST AUTHOR

A 75-task, nine-scenario streaming-video benchmark and reproducible pipeline for judging interaction trajectories.
